Attention: Lufthansa Airlines

Dear Sir or Madam:

In reference to the Tri-Star model M100L laser marker equipment DAWIRE has been successfully supplying the Airbus programs over the last year from our facility in London, Ontario, Canada. In addition to Airbus we also support Gulfstream programs with this equipment. We have been a supplier to Diamond Aircraft Industries facilities both in Canada and Austria for the past three years and I can state quite confidently that the M100L marker is the best equipment we've used to date. Currently we run the machine 16 hours per day 5 days a week and with good maintenance I can report that we have only had 1 down time in two years which lasted only 24 hours with excellent support from California. The system is modular, simply designed and very easy to support.

We depend on this system for 85% of the throughput from our facility and are currently investigating the procurement of a second unit to satisfy our demands.

If you require further information I'd be happy to talk with you regarding this equipment.

Sincerely,

Mark MacKenzie
President
